HOW TO CLAIM YOUR CME CERTIFICATE

Go to **WSAUA Website**

www.surgewest.org

Click on **CME/Evaluations**

1. To complete your daily session evaluations.
2. To print your certificate (after meeting is over).

CALIFORNIA RADIOLOGY CREDITS

California Radiologic License Renewal While Attending the WSAUA Annual Meeting

[Earn up to 31.75 Credits](#)

Instructions

1. Go to WSAUA Website - surgewest.org
2. Click on “CME/Evaluation” - then select
3. “CUA/ASRT Radiology Credits” Form to print
4. Print form, email to info@cuanet.org

The California Urological Association is pleased to announce that it has been able to obtain radiology credits thru the American Society of Radiologic Technologists (ASRT) for ASRT approved sessions during the WSAUA meeting. Qualified sessions in the program book will be indicated by **ASRT CREDIT** and in the Whova APP. Registered urologists will be able to obtain Category A Credit for Fluoroscopy / X-ray license renewal just by attending ASRT approved sessions while at the meeting. Note: 10 CEU are required to satisfy the California Department of Public Health requirement for renewing permits and certificates in radiographic technology.

Simply complete the ASRT Attestation Form to claim your credits and your certificate will be emailed to you. **This is a benefit made possible by the California Urological Association, making the ASRT certificates free to all California urologists this year. The value of this certificate is approximately \$450. Please continue your support of the CUA (www.cuanet.org) to continue this program.**

New Member & Young Urologist Mixer & Program

Monday, Oct. 26, 5:30 PM,
Lahaina Ballroom, Hosted Bar

Directed by Juan Andino, MD, MBA /
Jasper Bash, MD- YU AUA Rep from WSAUA

Featured Speaker

Jeffrey Loh-Doyle, MD, USC

**Speaking on:
Urology and Litigation:
Navigating an Unfamiliar Space**

Dr. Loh Doyle will speak on his experience, as being named in a lawsuit early in his career, on how to navigate this kind of challenging situation and what he learned to protect himself clinically while also engaging as an expert witness. "Litigation", the ugly "L Word", is not taught in medical school or residency but it is a reality of the US healthcare system and most, if not all, surgeons will be named in a lawsuit at some point in their careers. Learn how to best be prepared.

GAIN THE EDGE OVER PATIENT OUTCOMES

Blue Light Cystoscopy: From enhanced detection to improved outcomes

Enhanced visibility
can support a
higher quality TURBT

After initial
White Light TURBT

of residual tumors are found
at original resection site.
(in a review of 8,409 cases)¹

Upstaging is common and critical
White Light Cystoscopy
alone has limitations

At the time of
radical cystoscopy²

11/22 patients had
pathological upstaging

including
four with
node-positive disease

How soon should you perform
a Blue Light Cystoscopy?

A considerable proportion of invasive
lesions are **detectable only with BLC**.
The rate of pathological
upstaging is significant.²

21/47 patients had UWL-/BL+ concomitant CIS
and/or another T1 lesion

Blue Light Cystoscopy may not detect all malignant tumors.

Indication for Cysview®

Cysview is an optical imaging agent indicated for the cystoscopic detection of carcinoma of the bladder, including carcinoma in situ (CIS), in adult patients:

- with suspected or known lesion(s) on the basis of a prior cystoscopy
- undergoing surveillance cystoscopy for bladder cancer.

Important Risk & Safety Information for Cysview®

Limitations of Use

Cysview is not a replacement for random bladder biopsies or other procedures used in the detection of bladder cancer.

Warnings and Precautions

Anaphylactoid shock, hypersensitivity reactions, bladder pain, cystitis, and abnormal urinalysis have been reported after administration of Cysview. The most common adverse reactions seen in clinical trials were bladder spasm, dysuria, hematuria, and bladder pain.

Contraindications

Cysview should not be used in patients with porphyria or with known hypersensitivity to hexaminolevulinate or any derivative of aminolevulinic acid. Cysview may fail to detect some malignant lesions. False-positive fluorescence may result from inflammation, cystoscopic trauma, and scar tissue from previous bladder biopsy, or following intravesical treatment such as recent BCG immunotherapy or intravesical chemotherapy.

Use in Specific Populations

Safety and effectiveness have not been established in pediatric patients. There are no available data on Cysview use in pregnant women. Adequate reproductive and developmental toxicity studies in animals have not been performed. Systemic absorption following administration of Cysview is expected to be minimal. There are no data on the presence of hexaminolevulinate in human or animal milk, the effects on a breastfed infant, or the effects on milk production. The development and health benefits of breastfeeding should be considered along with the mother's clinical need for Cysview and any potential adverse effects on the breastfed infant from Cysview or from the underlying maternal condition.

Use of Blue Light Imaging Devices

Use Cysview with the KARL STORZ D-Light C Photodynamic Diagnostic (PDD) System or other FDA-authorized imaging device intended to perform Blue Light Cystoscopy (BLC®) with hexaminolevulinate hydrochloride in the indicated population. The light source enables both White Light Cystoscopy and Blue Light (wavelength between 360 nm and 450 nm) fluorescence Cystoscopy.

For system set-up and general information for the safe use of a blue light imaging device, refer to instruction manual for each of the system components.

Prior to Cysview administration, read the Full Prescribing Information and follow the preparation and reconstitution instructions.
